

JetDock is a secure DevSecOps portal providing a one-stop-shop for continuous updates, security scans, and deployments of application containers. Leveraging Artificial Intelligence (AI), smart agents, a command line interface (CU) and chat bot to increase a team's capability to rapidly deploy applications for projects. With a simple command, a user can pull down a software patch or application, run security scans and tests, and deploy it into an environment of their choice .

Integrations:

- Twistlock
- Anchore
- OpenSCAP
- Docker
- Kubernetes
- Helm Charts
- AWS and Azure environments

Deploy secure applications

Execute Security Scans

Maintenance and Support
of Current applications

JetDock decreases the time for organizations to build, test and deploy commercial off the shelf (COTS) and customized applications by 80% through seamless automation, saving organizations millions of dollars in testing and IT security costs.
